SUMMARY

Software Engineer and Data Engineer with experience in Android development, scalable backend systems, and cloud-native data pipelines. Skilled in Java, Spring Boot, Node.js, Android SDK, and AWS, with a proven track record of scaling platforms from 1K to 500K+ users. Founder building SaaS products focused on inventory automation and AI-assisted systems.

TECHNICAL SKILLS

Languages: Java, Python, JavaScript, TypeScript, SQL

Backend: Spring Boot, Node.js, Express.js, REST APIs, Microservices

Frontend: React.js

Mobile Development: Android (Java, Android SDK, JDK), MVC/MVVM Architecture, Google Play Services, REST API Integration

Databases: MongoDB, MySQL

Cloud & DevOps: AWS (EC2, S3, Lambda, Glue), Docker, Git, CI/CD

Data Engineering: ETL Pipelines, Data Modeling, Data Transformation

AI / Emerging: AI-assisted automation, Data Analytics, Predictive Systems (basic)

Other: System Design, Distributed Systems, Performance Optimization

WORK EXPERIENCE

Software Engineer

RS Technologies Inc.

March 2026 – Present

- Built and maintained Node.js backend services and internal tooling to automate large-scale workflows, processing millions of records with scheduled AWS job orchestration
- Improved overall system throughput by around 30% through Node.js code optimization, query restructuring, and efficient async processing patterns
- Developed React-based internal dashboards for monitoring system health, visualizing metrics, and surfacing validation failures to the engineering team
- Collaborated with cross-functional teams to define API contracts, resolve integration issues, and ship reliable backend services on schedule

Software Developer

I Giants Inc.

July 2024 – Jan 2026

- Developed backend services using Node.js and REST APIs, improving scalability and system reliability
- Optimized API performance, reducing response times and enhancing user experience
- Designed database schemas, supporting efficient data storage for high-volume applications
- Contributed to full-stack features, accelerating product delivery cycles

Team Lead (Android & Backend)

OSOS Pvt Ltd.

March 2023 – May 2024

- Led Android app development using Java and Android SDK, delivering scalable mobile solutions
- Integrated backend services (Node.js), ensuring seamless mobile-server communication
- Implemented Google Play Services (authentication, notifications), enhancing app functionality
- Managed team delivery, ensuring timely feature releases and system improvements

ENTREPRENEURSHIP & PROJECTS

Founder & CEO — SkyVerge Labs Co.

Sep 2025 – Present

- Founded a SaaS-focused company, building scalable software solutions for business automation
- Led full product lifecycle, from system design to deployment using cloud-native architectures
- Designed modular backend systems, supporting scalable and microservices-based architecture
- Exploring AI-driven enhancements, to enable predictive analytics and automation features

Kitchen Stock — Inventory Management System

- Built a full-stack inventory platform, automating raw material tracking and cost calculations
- Designed SKU-based architecture with multi-level dependencies (BOM system)

- Implemented dynamic unit conversion engine, supporting oz, kg, packs, and gallons
- Developed backend using Node.js and MongoDB, ensuring scalability and maintainability

API Documentation Tool | *Typescript, Node.JS*

Sep 2023 – Dec 2023

- Automated the generation of PDF or TXT documents for all API endpoints in **Node.js** projects, saving time and improving efficiency for developers.
- Designed an interface within VS Code, simplifying the navigation and documentation of **Node.js APIs** for development teams.
- Enhanced productivity by streamlining the API documentation process, ensuring accuracy and ease of use.

Media Upload Service | *NodeJS, ExpressJS*

Nov 2022

- Developed a robust file uploading service in **Node.js**, enabling users to upload files and retrieve unique URLs for easy access.
- Optimized file handling processes using **Express.js**, significantly improving upload speed and ensuring efficient file retrieval.
- Enhanced user experience by delivering a reliable and efficient file management system with seamless functionality.
- Designed and implemented advanced error-handling mechanisms, reducing upload failures and improving system reliability.

Token Authentication | *SprinBoot, Android, JAVA*

Aug 2021 – Dec 2021

- Developed an **Android** banking application with essential features, including checking account balances and viewing transaction statements.
- Built the backend using **SpringBoot microservices**, ensuring scalability and modular architecture.
- Created a secure token-based authentication system, improving app security and protecting sensitive user data.
- Optimized the app for user-friendly navigation, enhancing the overall user experience.

EDUCATION

George Mason University

Fairfax, VA, USA

Master of Science in Computer Science

May 2024

Guru Nanak Institute of Technology

Hyderabad, TS, INDIA

Bachelors in Computer Science and Engineering

Aug 2022.

CERTIFICATIONS

MERN Stack Fundamentals by Great Learning

MAY 2024

AWS Certified Solutions Architect - Associate

DEC 2024
